

Profood Sample Forum and FAQ Knowledge

Forum Question: What equipment do I need to start olive oil production?

Answer: A small olive oil production setup usually needs olive washing equipment, a crusher or mill, an oil press or decanter, filtration equipment, storage tanks, and bottles or packaging material. For a small cooperative, start with a press machine, basic filtration, and clean storage containers.

Forum Question: How can I package local food products better?

Answer: Sellers should choose packaging based on shelf life, transport distance, and product type. Vacuum packaging is useful for cheese, olives, dates, and meat. Glass bottles are useful for olive oil and argan oil. Clear labels should include product name, origin, weight or volume, and storage advice.

Forum Question: What should I check before buying second-hand equipment?

Answer: Check the equipment material, electricity requirements, production capacity, spare parts availability, maintenance history, hygiene condition, and whether it matches the product category you want to produce. Ask for a demonstration before purchase when possible.
